SÍNTESIS. Principales implicaciones de política económica

ABSTRACT

In this paper we focus on the relationship between fiscal decentralization and government quality. In a sample of 29 developing and developed countries over the period 1984-1997, fiscal decentralization has a positive effect on institutional quality but this effect diminishes as countries become wealthier. Moreover, the positive effect of fiscal decentralization on government quality is reduced by electoral and decision-making decentralization in poor and medium income countries whereas these forms of decentralization seem to improve the impact of fiscal decentralization on government quality in rich countries.

JEL Classification: H11, H77, K42.

Keywords: Quality of government, fiscal decentralization, political decentralization, panel data.

I. INTRODUCTION

In this paper, we empirically investigate the relationship between fiscal decentralization and government quality for a sample of twenty-nine poor and rich countries over the period 1984-1997. The quality of government is a multi-dimensional concept (La Porta *et al.*, 1999). In general, government quality improves if the public sector does not distort the proper functioning of the private sector (respects property rights, does not over-regulate), is an efficient administrator (low corruption, less bureaucracy, high tax compliance), provides public goods (education, health, infrastructures, etc.) and, finally, allows for and protects political freedom.

A good number of empirical studies have pointed to the importance of good government for economic growth (Knack and Keefer, 1995; Mauro, 1995; Hall and Jones, 1999; Acemoglu *et al.*, 2001; Salinas and Salinas, 2007). But the quality of government has itself been the object of analysis in an effort to understand why some countries have better governments than others. In this context, La Porta *et al.* (1999) point to the importance of economic, political and cultural factors in explaining international differences in government quality. More recently, Adserà *et al.* (2003) and Persson *et al.* (2003) have shown the importance for government quality of periodic elections, a well informed electorate and well designed electoral rules¹.

Another factor which may determine variation in government quality is the degree of fiscal decentralization. As is explained in section 2 below, the theoretical literature provides arguments both for and against decentralizing fiscally in an effort to contribute towards better government. Similarly, the lion's share of empirical studies that have examined the effect of fiscal decentralization on government quality have not clearly established the sign and significance of this relationship as is explained in section 3. This study will add to this empirical literature by estimating the impact of fiscal decentralization on government quality based on a panel of countries. It improves on previous studies which are mostly cross-section based not least because it increases the sample size and thus improves the precision of the estimates. Moreover, and as discussed in section 4, the use of fixed effects estimation corrects one serious problem affecting previous cross-section estimates namely, omitted variable bias.

The obtained results, discussed in sections 5 and 6, point to a positive relationship between fiscal decentralization and government quality in the case of poor to medium income countries. Another notable finding which emerges

¹ See Aixalà and Fabro (2007a) for a cross-section analysis of the determinants of government quality as well as Aixalà and Fabro (2007b) for a review of the literature of the impact of government quality on economic growth.

from the analysis is the impact of political decentralization on this relationship. Political decentralization seems to erode the positive effect of fiscal decentralization on government quality in poor countries while it improves its impact on the quality of government in rich countries.

2. THEORETICAL PRIORS

There are several theoretical arguments why decentralization may improve government quality. First, decentralized government will be better informed about local conditions and so can better satisfy citizen preferences (Oates, 1972). Second, citizens themselves may be better informed about local government activity and, assuming that local politicians are locally elected rather than centrally appointed, good (or bad) performance in such a setting can be directly rewarded (or punished) (Seabright, 1996; Tabellini, 2000).

Third, in a fiscally decentralized setting with interjurisdictional mobility and thus competition, we would expect locally elected governments to offer public goods more efficiently (responsive to local demands and at lower cost) and also to be less corrupt since economic agents would flee more corrupt regions (Hirschman, 1970; Brennan and Buchanan, 1980; Weingast, 1995; Montinola *et al.*, 1995). The capacity of economic agents to choose among regulatory regimes in a competitive setting will tend to drive down the degree of corruption whereas corruption is likely to increase in a setting characterized by numerous public monopolies all of which must be satisfied to undertake any particular economic activity (Shleifer and Vishny, 1993). In a competitive setting, voters can use the performance of each jurisdiction as a benchmark and this should increase efficiency in public good supply (Salmon, 1987; Breton, 1996).

The inter-jurisdictional competition literature emphasizes the importance of tying local revenues to expenditures for the proper functioning of competition since vertical transfers may create incentives for local officials to ignore competitive pressures for better management (Oates, 1999; Fisman and Gatti, 2002b). Similarly, in the context of revenue sharing schemes, assigning local government a greater share of revenue from locally-originating taxes may lead them to limit costly regulations, corruption as well as provide public goods more efficiently since these reduce economic activity and thus eventually reduce its tax base (Zhuravksaya, 2000; Jin *et al.*, 2005). More generally, sub-central governments will tend to be more inefficient if they face soft rather than hard budget constraints, or, in other words, if they can count on the central government for future bail-outs (Qian and Rolands, 1998).

On the other hand, several arguments have been made explaining why fiscal decentralization may deteriorate government quality. For example, if capital is

too mobile, local governments may not be able to collect sufficient taxes to provide basic public goods (Keen and Marchand, 1997; Oates, 1999). Further, locally elected governments may indulge in rent-seeking behaviour if more immobile factors such as farmers, workers or consumers are more numerous than mobile ones such as investors (Rodden and Rose-Ackerman, 1997).

Moreover, the benign effects of competition depend on the assumption that sub-central jurisdictions are homogeneous with regard to their factor productivity. If they are heterogeneous, competition may mean the outflow of capital from less endowed regions leading governments in these regions to give up on business-friendly policies and to dedicate themselves to predation instead (Cai and Treisman, 2005). In addition, local governments may also compete for capital by helping agents cheat the central government in ways that reduce the latter's capacity to enforce regulations and collect taxes (Cai and Treisman, 2004). Also, although assigning local governments a greater share of revenue may improve their incentives, it may at the same time weaken the incentives of central government by reducing its stake in economic development since its share of locally generated revenues is reduced (Treisman, 2006).

Additionally, more decentralized polities may involve duplication and thus a waste of resources (Rousseau, 1762). Moreover, local officials are more susceptible to corruption than central government ones because of intimacy and frequency of interaction and greater discretion on the part of local governments (Tanzi, 1995; Prud'homme, 1995), because national office being more prestigious and powerful it will be more intensely monitored (Prud'homme, 1995; Tabellini, 2000) or because local officials are more susceptible to capture by local economic interests partly because voters are more uninformed due to lower media attention and because interest groups find it easier to overcome free-rider problems (Bardhan and Mookherjee, 2000).

In this vein, Blanchard and Shleifer (2001) suggest then need for a degree of political centralization –such as for example the right of central government to appoint or fire regional governors or the creation of national parties exercising influence on regionally elected governors– so as to deal with the possibility of capture. Alternatively, the combination of strong national parties and elected rather than appointed sub-central government politicians makes them sensitive to national and local preferences respectively and is thereby likely to improve the effectiveness of fiscal decentralization (Riker, 1964; Enilolopov and Zhuravskaya, 2007).

3. EMPIRICAL PRIORS

Most empirical studies on the impact of decentralization have focused on one aspect of government quality namely, corruption. Thus, De Mello and Barenstein (2001) control for GDP per capita and population and find that more fiscally

decentralized countries tend to be less corrupt. Fisman and Gatti (2002a) find a similar relationship but controlling for more factors (GDP per capita, civil liberties, population and government share of expenditure of GDP). They moreover find that when fiscal decentralization is considered then whether a country is federal or not has no effect on corruption. Treisman (2002a) finds that if one includes a control for the percentage of Protestants in the population in Fisman and Gatti's estimations, the negative relationship between fiscal decentralization and corruption disappears - he finds no statistically significant relationship between fiscal decentralization and corruption. All these empirical studies calibrate the impact of fiscal decentralization on corruption based on cross-section analyses².

Several empirical studies have gone beyond corruption to consider other aspects of government quality in order to investigate the importance of fiscal decentralization. Estache and Sinha (1995) calibrate the effect of expenditure decentralization on infrastructure provision in a panel of both developing and developed countries. They find that decentralization is related to more infrastructure spending in sub-central levels in developing countries and, to a lesser extent, in developed ones. Robalino *et al.* (2001) also use panel data and find that more fiscally decentralized countries (again expenditure decentralization) have lower mortality rates. In another study, (Khaleghian, 2003) shows that fiscal decentralization (measured in terms of both a binary variable and as expenditure and revenues in the hands of sub-central governments) is related to higher immunization coverage in a panel of low and middle-income countries. In a cross-section study, Treisman (2002a) finds expenditure decentralization ambiguously related to public good provision (positively with infrastructure and negatively with health and education).

Defining government quality more widely, Huther and Shah (1998) find that fiscal decentralization is associated with enhanced quality of government as measured by citizen participation, political and democratic accountability, social justice, improved economic management and reduced corruption. However, their study suffers from omitted variable bias since they only provide simple correlations among these variables.

Finally, based on both cross-section and panel data of low and high income countries, Dreher (2006) estimates the relationship between expenditure and revenue decentralization and quality of government measured as respect of law and order, the cost of opening up a new business and judicial independence while controlling for GDP, population and civil liberties. He finds that law and order is more likely with a higher share of sub-national revenues for the full

² For a survey of the causes and consequences of corruption see Lambsdorff (2006). For a review of some of the theoretical and empirical literature on the relation between decentralization and corruption see Bardhan and Mookherjee (2006).

sample and low income countries but not for high income countries. The same happens with the cost of starting a business. Judicial independence increases with sub-national revenue or expenditure share for both high income countries and the full sample.

In this paper we estimate the impact of fiscal decentralization on government quality more widely defined based on panel data. As will be more fully explained in the following section, our definition of government quality is wider than that used by Dreher (2006) since it goes beyond law and order to include corruption and bureaucratic quality. We reduce the risk of possible omitted variable bias present in previous studies by including more time-variant control variables as suggested by the literature as well as several interaction terms. In addition, we correct our estimates both for serial autocorrelation and cross-section heteroscedasticity to avoid overestimating the significance of our explanatory variables.

4. DATA AND EMPIRICAL METHODOLOGY

In this section we review how both fiscal decentralization and quality of government have been measured in empirical work with a view to identifying the strengths and weakness of the available data. We moreover introduce the empirical methodology which is employed in the following section and review the set of control variables which have been used in related empirical literature examining the relationship between fiscal decentralization and government quality.

The indicator of government quality employed in this paper comes from the International Country Risk Guide (ICRG) as developed by the Political Risk Services Group since the early 1980s in an effort to assess the political, economic and financial risks in more than 120 countries. The index is based on the analysis of a worldwide network of experts, and is subject to a peer review process to ensure the coherence and comparability across countries. Different variables from the ICRG data have been used to measure the determinants of government quality since La Porta's *et al.* (1999) seminal piece on the subject. We focus on three dimensions from this source namely corruption, rule of law and bureaucratic quality. Corruption refers to the demand for bribes by political and administrative bodies as well as patronage, nepotism, job reservation, 'favors-for-favors', etc. The variable law and order assesses the strength and impartiality of the legal system as well as popular observance of the law. Bureaucratic quality refers to the strength, expertise, autonomy and recruitment and training mechanism of the civil service. The quality of government indicator used here is the average of these three dimensions and is

scaled from 0 to 1 where a higher number implies higher government quality. Averaging the dimensions has the advantage of reducing the influence of idiosyncratic ratings stemming from any one dimension. On the negative side however, it does not allow us to separate the effect of each dimension.

Fiscal decentralization refers to the distribution of tax revenues and expenditures among the different tiers of government. A system is more fiscally decentralized the greater the proportion of tax-revenues and expenditures “owned” by lower tiers of government. The most widely used measure of fiscal decentralization in the literature is provided by the IMF’s Government Finance Statistics (GFS) and refers to expenditure or revenue share of sub-central governments in total public expenditures or revenues (Expshare and Revshare) or as a proportion of GDP (ExpGDP and RevGDP). But these general definitions are problematic in that they do not reflect on whether sub-central governments own these resources (Ebel and Yilmaz, 2002; Rodden, 2004; Martinez-Vazquez and McNab, 2006). Thus, expenditures that are mandated by the central government appear as sub-national expenditures in the GFS while revenues received from grants by the central government appear as sub-central revenues regardless of whether they are conditional or unconditional. As a result, expenditure and revenue accruing to sub-central levels of government will tend to overestimate the degree of fiscal decentralization (World Bank, 2004)³. Despite their shortcoming, these indicators are available for the widest coverage of countries and time periods and it is for this reason that we too employ them in this paper. They give rise to a balance panel of 29 countries for the period 1984 to 1997 (see appendix I for the list of countries).

The GFS also contain data on other fiscal decentralization variables but with an even more limited cross-section and temporal availability. One line of data refers to vertical imbalance (*VIM*) or the degree to which sub-national governments rely on central government transfers to support their expenditures (measured as intergovernmental transfers as a share of sub-national expenditures). Another calculates transfers share as transfers to sub-central governments as a share of total sub-national revenues and grants (*Trashare*). However, these measures do not distinguish what proportion of transfers is conditional versus general purpose. The GFS also contain information about sub-national tax and non-tax revenues. For example, tax share measures sub-national tax revenue as a percentage of total sub-national revenues (*Taxshare*). But it does not distinguish whether they are collected through shared taxes, piggybacked taxes, and locally determined “own-source”

³ Rodden (2004) points out that in the GFS data Denmark comes out the 3rd most decentralized country in the world (even more decentralized than the US) though the central government regulates almost every aspect of local government finance. The same goes with Nigeria (7th position) although the states were really administrative outposts of the central government.

taxes. Similarly, no consideration is given to whether the central government has the power to set the rate and the base, leaving sub-national governments just to collect revenues labeled as own-source (Rodden, 2004). The OECD (1999) tackles these data problems for OECD countries generating an analytical classification of sub-central taxes according to the degree of discretion of sub-central government. Based on this classification, Stegarescu (2006) generates several indicators of decentralization across 23 OECD countries for the period 1965-2001 including a measure of tax decentralization which refers to sub-central government tax revenue –on which the sub-central government determines the tax rate and/or base– as a proportion of total government tax revenue taxes (*Taxdec*)⁴.

The just mentioned variables are available for the 15 high income countries from our total sample of 29 countries. As can be appreciated in the correlation matrix in table I below there are four variables which are closely correlated namely, *ExpGDP*, *Expshare*, *RevGDP* and *Revshare*. Stegarescu’s *Taxdec* measure is also closely correlated to the IMF statistics on the revenue side but less so on the expenditure side as we would expect.

Table I
CORRELATION MATRIX FOR THE FIFTEEN HIGH INCOME COUNTRIES.
DECENTRALIZATION VARIABLES

	ExpGDP	ExpShare	RevGDP	Revshare	Taxdec	Taxshare	Trashare	VIM
<i>ExpGDP</i>	1.0000	0.8812	0.8762	0.7640	0.6518	0.2548	-0.2571	-0.2568
<i>Expshare</i>	0.8812	1.0000	0.8523	0.9143	0.7113	0.3074	-0.3843	-0.3796
<i>RevGDP</i>	0.8762	0.8523	1.0000	0.9182	0.8181	0.6315	-0.6571	-0.6501
<i>Revshare</i>	0.7640	0.9143	0.9182	1.0000	0.8251	0.5963	-0.6754	-0.6668
<i>Taxdec.</i>	0.6518	0.7113	0.8181	0.8251	1.0000	0.6447	-0.6197	-0.6200
<i>Taxshare</i>	0.2548	0.3074	0.6315	0.5963	0.6447	1.0000	-0.9183	-0.9471
<i>Trashare</i>	-0.2571	-0.3843	-0.6571	-0.6754	-0.6197	-0.9183	1.0000	0.9869
<i>VIM</i>	-0.2568	-0.3796	-0.6501	-0.6668	-0.6200	-0.9471	0.9869	1.0000

All correlations are statistically significant at the 1% level.

Another highly correlated pair of fiscal decentralization indicators are *VIM* and *Trashare* which is not surprising since they both capture sub-central

⁴ Even with such an indicator, Rodden (2004) alerts us that ideally one should take into account the possibility that central governments may restrict fiscal autonomy through formal limitations on borrowing (not only through conditional grants and regulation of tax rate and base).

government dependence on central transfers on the expenditure and revenue sides respectively. Both these variables are moreover highly negatively correlated with Taxshare which again is what we would expect since it is the negative image of these two variables – it captures tax-autonomy whereas they capture the tax-dependence of the sub-central governments. These three variables are less correlated with Taxdec as well as Revshare and RevGDP and much less correlated with the general expenditure variables offered by the IMF.

Our empirical strategy is based on fixed effects estimation for panel data. Bringing fixed effects estimation to bear on the relationship between fiscal decentralization and government quality has one important advantage over previous cross-section estimations exploring this relationship namely, the ability to control for cross-country heterogeneity due to time constant (or slowly changing) observable or unobserved factors (cross-section fixed effects) as well as the ability to control for period-specific factors common to all cross-section units (period-fixed effects). Time constant factors include many variables which have been typically employed in cross-section analyses of the determinants of quality of government such as ethno-linguistic fractionalization, legal origin, religion, latitude, country area and continental or regional dummies. Given the possibility that these variables, and other non-observable ones, may be related to both fiscal decentralization and government quality, their exclusion would induce omitted variable bias, affecting both the estimated impact of decentralization and its statistical significance. Bardhan and Mookherjee (2006) identify this form of bias as one of the important methodological problems with existing cross-section studies estimating the effect of decentralization on governance.

We lag the RHS variables with their values lagged one period to mitigate problems stemming from possible reverse causality in the panel regressions (see also, Enilolopov and Zhuravskaya, 2007). To allow for arbitrary period serial correlation and period heteroskedasticity between the residuals for a given cross-section, we report Period SUR panel corrected standard errors. Moreover, in order to fathom whether the first order autocorrelation we detect seriously alters the statistical significance of our findings, we also undertake regressions where we correct for this by way of taking four year averages⁵. We allow for cross-section heteroskedasticity in these autocorrelation-free regressions by reporting White cross-section corrected standard errors.

⁵ Davoodi and Zoo (1998) also take averages when measuring the impact of fiscal decentralization on economic growth based on a panel of data. They argue that this is reasonable since they would not expect fiscal decentralization to affect year to year changes in economic growth. This argument could probably be made more strongly for the impact of fiscal decentralization on government quality.

Our fixed effect estimation then reduces the likelihood of omitted variable bias since it eliminates the possible influence coming from both observable and unobservable time constant variables. What fixed effects estimation does not control for are time variant omitted variables affecting government quality and fiscal decentralization. As a result and in tune with the research in this area using both cross-section and panel data, we include the following time variant control variables (available in our sample of countries) in our regressions: real GDP per capita, democracy, size of government, population, and checks and balances (see appendix 2 for descriptions and sources of all the variables). We therefore estimate the following equation:

$$\text{Government Quality}_{it} = \alpha_i + Y_t + \beta_1 \text{Fiscal Decentralization}_{it-1} + \beta_2 X_{it-1} + \varepsilon_{it}$$

where i refers to countries and t to years, α_i and Y_t are country and period fixed effects respectively, X_{it} is the vector of control variables and ε_{it} is the error term.

Richer countries tend to be more decentralized (Panizza, 1999; World Bank, 2004) and have better government quality since economic development makes better quality institutions more affordable (Islam and Montenegro, 2002) and will tend to create a demand for better government (La Porta, *et al.* 1999) perhaps because of income's positive effect on education, literacy and depersonalized relationships (Treisman, 2000). Democracy is positively correlated with decentralization (Panizza, 1999; Treisman, 2002b) and is likely to be negatively related to corruption since it makes politicians more accountable (Adserà *et al.*, 2003).

Treisman (2002a) takes population to be an indicator for country size and expects larger (more populous) countries to be more decentralized but also to have lower government quality – small states are easier to govern. Mello and Barenstein (2001) suggest that more populous countries may be more heterogeneous. This being the case, we would expect population (as a proxy of heterogeneity) to be positively related to decentralization (Panizza, 1999) and negatively related to quality of government (La Porta *et al.*, 1999).

More decentralized countries are likely to have more checks and balances. Checks and balances in the political decision-making process could stabilize good institutions but by locking in the status quo they may just as much impede reforms, including those which may improve the quality of government (Treisman, 2002a).

All other things equal, one would expect a larger public sector to be relatively more decentralized. Moreover, Tanzi (1998) expects a bigger state sector to imply greater corruption due to the greater possibility for rents. On the other hand, Fisman and Gatti (2002a) expect a larger government to enjoy economies of scale in the fight against corruption. Similarly, the effect of a larger

state sector on the rule of law and bureaucratic quality is arguably positive insofar as more resources improve the capacity of government to provide such services. In relation to this, higher civil service pay has also been found to reduce bureaucratic corruption (Van Rijckeghem and Weder, 2001).

Consistent with previous literature then, we expect a positive effect on government quality coming from income and democracy, a negative effect coming from population while that of government size and checks and balances is more ambiguous.

5. EMPIRICAL RESULTS

The variables included in the regressions reported in this section are those which are mostly statistically significant or the exclusion of which seriously changes the results. This means that several variables previously discussed namely, democracy, checks and balances and population are not included because they are not significant and their absence has no bearing on the results. This is despite using several indicators of democracy available (see appendix 2). Especially in the case of democracy and checks and balances, their irrelevance may be due to the limited variation through time for the sample of countries that we examine here. In the tables that follow, the size of government is positively related with the quality of government and this relationship tends to be statistically significant for the sample of high income countries.

Tables 2 and 3 report the results for the whole sample of countries measuring fiscal decentralization in terms of expenditure and revenue shares of sub-central governments in total government expenditure and revenues respectively. On the expenditure side fiscal decentralization has a positive and statistically significant effect on government quality (regression 1). The direction and statistical significance of this relationship is reinforced in the regression using the four year averages of the variable as a way of correcting for a first-order autocorrelation process detected (regression 2). Moreover, statistical significance is improved with the inclusion of an interaction variable capturing political institutions as suggested by Enilolopov and Zhuravskaya (2007). It turns out that if regional governments or legislatures are elected rather than appointed (regression 3) or if the constitution grants sub-national regions residual powers or autonomy in certain areas (regression 4), then the positive

impact of fiscal decentralization on government quality would be neutralized for the complete sample⁶.

Here as elsewhere in this paper, standard errors in parentheses.

*, **, *** measures statistical significance at the 10, 5 and 1% levels respectively. All continuous variables are in logarithms.

Following Robalino *et al.* (2001) and Khalegian (2003), we introduce an interaction term between fiscal decentralization and income so as to capture possible differences in performance between rich and poor countries. As a result, we find that the positive effect of fiscal decentralization on government quality is true for poor to medium income countries but not for high income countries as can be seen in regressions 5 to 8. The interaction term is negative and statistically significant and yields a turning point for the base regression (5) of \$13,340. The negative impact of political decentralization on the relationship between fiscal decentralization and government quality also appears.

⁶ Following Treisman (2002a) this refers to electoral decentralization and decision-making decentralization respectively.

These results are confirmed when using revenue share as our measure of fiscal decentralization (table 3) although their statistical significance is reduced with this measure in those regressions which exclude the interaction between fiscal decentralization and GDP per capita. The turning point of the effect of GDP on the relationship between fiscal decentralization and government quality is now \$9,754 for the base regression (5). Again, political decentralization seems to have a negative effect on the relationship between government quality and fiscal decentralization.

Since we detect that the impact of fiscal decentralization on government quality differs between richer and poorer countries, we split the sample between low to medium income and high income countries and repeat our estimations (see also Aixalà and Fabro 2007a). Table 4 reports the results for a group of 14 low and medium income countries. We confirm the positive relationship between fiscal decentralization and the quality of government, especially on the expenditure side. However, the negative effect of electoral decentralization or decision-making decentralization (regional autonomy) on this

relationship is also observed. Indeed, in the presence of political decentralization the positive relationship between fiscal decentralization and government quality becomes a negative one. Thus, the result whereby fiscal decentralization positively affects government quality in poorer countries can only be affirmed in the absence of political decentralization.

Turning now to the group of 15 high income countries (table 5), the positive relationship between government quality and fiscal decentralization disappears. In fact, the direction of this relationship is reversed: more fiscal decentralization reduces government quality in this sample. Interestingly, this negative impact is again altered in the presence of electoral or decision-making decentralization. In rich countries, electoral decentralization mitigates the negative impact of fiscal decentralization while decision-making decentralization may even make this impact a positive one. But all these statements must be immediately qualified since our decentralization variables are neither statistically significant nor are they economically significant compared to their previous values (their impact is reduced by a factor of 10). It seems therefore that the best we can do with the available data is to state that fiscal decentralization does not seem to have a significant effect on government quality in high income countries.

Table 5

In the case of the rich countries it is possible to check the robustness of the obtained results using the different measures of decentralization available. In table 6, we regress the government quality measure we use on GDP per capita and the size of government while varying the fiscal decentralization indicator. We start with the wider IMF measure (but now spending or expenditure as a percentage of GDP to complement previous results), going through the IMF's measure of tax autonomy followed by its measures of transfer dependence and ending with the OECD measure of tax decentralization taken from Stegarescu (2006) which arguably goes some way towards correcting the over-estimation of decentralization attributed to the IMF measures.

Table 6
DECENTRALIZATION IN HIGH INCOME COUNTRIES

	GFS Decentralization measures					OECD
	(1) ExpGDP	(2) RevGDP	(4) Taxshare	(5) Trashare	(6) VIM	(3) Taxdec
Decentralization	0.031 (0.06)	-0,033 (0,04)	-0.040 (0.02)*	0.026 (0.04)	0.027 (0.03)	-0.007 (0.02)
GDP per capita	0.409 (0,13)***	0.430 (0,12)***	0.385 (0,12)**	0.416 (0,12)***	0.416 (0,12)***	0.431 (0,12)**
Size Government	0,142 (0,14)	0.222 (0,11)**	0,208 (0,10)**	0,170 (0,11)	0,173 (0,11)	0,191 (0,11)*
Adjusted R ²	0.87	0.86	0.87	0.87	0.87	0.87
Observations	195	195	195	195	195	195

The results tend to follow those obtained using expenditure and revenue share. There is a negative relationship between fiscal decentralization and government quality (as before the relationship is positive if the expenditure side is the measure used). But this negative impact is both statistically and perhaps more importantly, economically close to zero, less so when tax share is the measure used but much more so when the OECD measure is employed. Again, it seems, fiscal decentralization has little if any impact on government quality as we measure it in this paper.

Before closing here it is worth pointing out that several other variables were included but not found to be statistically significant, nor did they appreciably change the results. Thus, we interacted fiscal decentralization with two measures of party strength as suggested by Enilolopov and Zhuravskaya (2007) namely, party age and legislative fractionalization but these terms were not statistically different from zero nor did they alter the regression results. The squared value of decentralization was also included to check for a quadratic relationship between it and government quality but again nothing changed. Finally, in order to fathom whether the results are being driven by one particular country in our sample, we repeat our regressions after removing each of the 29 countries one at a time for the whole sample as well as each of the 15 and 14 high and low to medium income countries for their respective samples. The results are stable indicating that no single country is driving our results.

6. DISCUSSION

One significant finding in our study is the importance of electoral and decision-making decentralization on the relationship between fiscal decentralization and government quality. In a cross section study and using measures of electoral and decision-making decentralization, Treisman (2002a) finds no statistically significant effect between these variables and corruption⁷. Interacting these variables with fiscal decentralization (subnational expenditure share) did not change his results. Alternatively, Enilolopov and Zhuravskaya (2007) do find a positive effect on the relationship between fiscal decentralization and public good provision (health and education) coming from electoral decentralization. Our results confirm their findings but now vis-à-vis fiscal decentralization's effect on an aggregate measure of government quality based on corruption, law and order and bureaucratic quality. Again, we find that decision-making decentralization improves this relationship. Our results are maintained when we interact fiscal decentralization with a federalism dummy.

⁷ This follows his earlier finding (2000) that federal countries are more likely to be corrupt (see also, Goldsmith, 1999 and Gerring and Thacker, 2004).

But our findings go further since they differentiate the impact in poor to medium income countries and rich countries. We find that both electoral and decision-making decentralization autonomy have a positive effect on the relationship between fiscal decentralization and government quality in rich countries but a strong negative effect on this relationship in poor countries. It may be that sub-national political institutions in poorer countries are under-developed compared to those in wealthy countries, and as a result, they are unable to harness the positive effects expected from electoral and decision-making decentralization. Indeed, less developed political institutions may convert the virtues expected from these forms of decentralization into vices. This echoes Shah's (2006) concern that sub-national governments in developing countries may be more susceptible to capture by local economic interests as well as Bardhan's (2002) warning that electoral decentralization in democratically immature countries may not work as expected.

The differential effect of political institutions in rich and poor countries is interesting because it is related to another notable finding from our research namely, that the marginal benefits of fiscal decentralization vis-à-vis government quality diminish as GDP per capita increases. This finding parallels those of Robalino *et al.* (2001) and Khalegian (2003) in relation to health and education outcomes and is very similar to Dreher's (2006) result –based on both a cross-section and panel analysis– such that revenue decentralization positively and significantly affects law and order in a sample of poor countries but that this relationship becomes negative and insignificant in a sample of rich countries. Our results for rich countries are robust to the use of several different measures of fiscal decentralization including the OECD's measure of tax decentralization which goes some way towards correcting for the over-estimation of fiscal decentralization in the IMF's Government Finance Statistics.

It could be that this result may be driven by our use of the GFS measures of fiscal decentralization but since the more precise OECD-type data is not available for poor countries we cannot pursue this possibility⁸. Or it could be, as Robalino *et al.* (2001) suggest, that the problems associated with centralized systems diminish as economic development takes place. If, for some reason, central institutions in rich countries are better able to provide government quality as we define it here, then this would explain the insignificant impact (both economic and statistical) of fiscal decentralization in our rich country sample. This said, our analysis points to an alternative explanation namely the importance of political institutions in the guise of electoral and decision-making

⁸ We second here Rodden's (2004) call to extend the OECD type methodology to a much wider set of countries, especially developing ones, so as to better capture the importance of revenue mobilization when measuring the impact of fiscal decentralization on different variables including government quality.

decentralization. When these institutions are considered, the positive effect of fiscal decentralization on government quality in poor countries is neutralized while the effect in rich countries is positively reinforced. Again, the political institutions at the sub-national level may be less developed in poorer countries.

7. CONCLUSIONS

In this paper we have focused on the relationship between fiscal decentralization and government quality. In a sample of 29 poor, medium income and rich countries over the period 1984-1997, fiscal decentralization has a positive effect on institutional quality but this effect diminishes as countries become wealthier. Moreover, the positive effect of fiscal decentralization on government quality is reduced by electoral and decision-making decentralization in poor and medium income countries whereas these forms of decentralization seem to improve the impact of fiscal decentralization on government quality in rich countries.

Before closing here it's worth noting that governments may decentralize for different reasons (Ebel and Yilmaz, 2002). Western countries mainly decentralize in order to provide public services in a more cost-effective way, whereas low income countries pursue decentralization as a way to overcome macroeconomic instability and ineffective governance. Throughout post-communist Central and Eastern Europe, decentralization is intimately linked to the transition from a socialist system to market economy and democracy. In Latin America, the origin of decentralization is the political pressure from the people for democratization. All over the world, decentralization may be an important instrument for diffusing secessionist tendencies (World Development Report, 1999/2000). Our study points out that, *on average*, developing countries which are fiscally decentralized but politically centralized may have better quality governments. But any policy prescriptions flowing from these results must take into consideration the particular circumstances of the country in question and the wider motives for undertaking decentralization in the first place.

APPENDIX I

LIST OF COUNTRIES

Low and medium income	High income
Argentina	Australia
Bahrain	Austria
Bolivia	Belgium
Brazil	Canada
Costa Rica	Denmark
Dominican Republic	Finland
Hungary	France
India	Iceland
Indonesia	Ireland
Malaysia	Netherlands
Mexico	Norway
Romania	Spain
South Africa	Sweden
Thailand	UK
	US

APPENDIX 2. Description of the Variables

Government Quality: Is the mean value of the ICRG variables “Corruption”, “Law and Order” and “Bureaucracy”. Source: *Quality of Government Institute* at <http://www.qog.pol.gu.se/>.

Decentralization: All fiscal decentralization variables come from the Government Finance Statistics of the IMF except the variable Tax Decentralization which comes from Stegarescu (2006).

Income: Real Gross Domestic Product (RGDP) *per capita*. Source: *World Penn Tables* at <http://pwt.econ.upenn.edu/>.

Government size: Government Share of Real GDP. Source: *World Penn Tables*.

Population: Total Population is based on the de facto definition of population, which counts all residents regardless of legal status or citizenship — except for refugees not permanently settled in the country of asylum, who are generally considered part of the population of their country of origin. Source: *World Penn Tables*.

Democracy: One variable is an institutionalized democracy indicator on a scale from 0 to 10. It is derived from codings of the competitiveness of political participation, the regulation of participation, the openness and competitiveness of executive recruitment, and constraints on the chief executive. Source: Variable DEMOC from *Polity IV* at <http://www.cidcm.umd.edu/polity/>. Another variable measuring democracy is the GASTIL INDEX which we employ as the average values of the political rights and civil liberties indicators. Source: *Freedom House* at <http://www.freedomhouse.org/>.

Age of democracy: Corresponds to the first year of an uninterrupted string of positive yearly POLITY IV values until the end of the sample, given that the country is also an independent nation (foreign occupation during WWII not considered an interruption of democracy). Source: Adapted from Persson *et al.* (2003).

Checks and balances: Captures the number of veto players and whether or not these players are competitively elected. Source: Variable CHECKS from Beck *et al.* (2001).

Elections: Dummy variable. 0 if neither regional executive nor regional legislature are locally elected. 1 if either are elected. Source: Adapted from the variable STATE from Beck *et al.* (2001).

Autonomy: Dummy variable where 1 represents residual and/or autonomy where residual means that in the constitution subnational governments are given residual powers and autonomy means that subnational legislatures have

autonomy in certain specified areas not explicitly subject to central laws. Source: Treisman (2002a).

Federalism: Dummy variable where 1 represents federations as classified by Elazar (1995) a leading federalism scholar. Source: Treisman (2002a).

Legislative fractionalization: The probability that two deputies picked at random from the legislature will be of different parties. Source: Variable FRAC from Beck *et al.* (2001).

Party age: This is the average of the age of the 1st and 2nd government parties and the 1st opposition party, or the subset of these for which age of the party is known. Source: Variable PARTY AGE from Beck *et al.* (2001).

SÍNTESIS

PRINCIPALES IMPLICACIONES DE POLÍTICA ECONÓMICA

A nivel teórico hay distintos argumentos que justifican que el grado de descentralización fiscal puede tener implicaciones positivas o negativas sobre la calidad de las actuaciones del sector público. A nivel empírico, la escasez de estudios aplicados, hasta fechas relativamente recientes, hace que aún no exista un cierto consenso sobre la magnitud y el signo del impacto de la descentralización sobre la calidad de gobierno. Si bien es cierto que en los últimos lustros han aparecido un número elevado de trabajos que tratan de contrastar la presencia de una relación directa entre ambas variables, los resultados son aún limitados y no ofrecen pruebas concluyentes.

Desde una perspectiva académica, la aparición de distintos indicadores de calidad de gobierno, desde mediados de los años noventa, ha supuesto un nuevo impulso para el desarrollo de trabajos empíricos que traten de esclarecer la relación entre la descentralización fiscal y la calidad de las actuaciones del sector público.

Los resultados obtenidos en este trabajo para una muestra de 29 países y para el período 1984-1997, indican que la descentralización fiscal tiene un impacto positivo sobre la calidad de gobierno, pero este efecto disminuye con el nivel de renta de los países. En otras palabras, los efectos de la descentralización fiscal en los países ricos pueden ser distintos que en los países pobres.

Otro resultado destacable que se deriva de este trabajo, es que el impacto positivo de la descentralización fiscal sobre la calidad de gobierno se reduce si va acompañada de descentralización política en los países pobres, mientras que en los países ricos sucede el fenómeno contrario. Una posible explicación de este comportamiento diferencial es que los países pobres sufrirían de unas instituciones subnacionales no lo bastante desarrolladas para aprovechar la mayor descentralización fiscal. En cambio, en los países ricos, la descentralización tendría un impacto positivo siempre que estuviera acompañada de descentralización política.

Este es un resultado ciertamente importante tanto desde el punto de vista académico, por novedoso, como desde el punto de vista aplicado, por su potencial trascendencia para la realidad de los sectores públicos de los diferentes países y los respectivos organigramas y niveles de descentralización fiscal y/o política.

NORMAS DE PUBLICACIÓN DE PAPELES DE TRABAJO DEL INSTITUTO DE ESTUDIOS FISCALES

Esta colección de *Papeles de Trabajo* tiene como objetivo ofrecer un vehículo de expresión a todas aquellas personas interesadas en los temas de Economía Pública. Las normas para la presentación y selección de originales son las siguientes:

1. Todos los originales que se presenten estarán sometidos a evaluación y podrán ser directamente aceptados para su publicación, aceptados sujetos a revisión, o rechazados.
2. Los trabajos deberán enviarse por duplicado a la Subdirección de Estudios Tributarios. Instituto de Estudios Fiscales. Avda. Cardenal Herrera Oria, 378. 28035 Madrid.
3. La extensión máxima de texto escrito, incluidos apéndices y referencias bibliográficas será de 7000 palabras.
4. Los originales deberán presentarse mecanografiados a doble espacio. En la primera página deberá aparecer el título del trabajo, el nombre del autor(es) y la institución a la que pertenece, así como su dirección postal y electrónica. Además, en la primera página aparecerá también un abstract de no más de 125 palabras, los códigos JEL y las palabras clave.
5. Los epígrafes irán numerados secuencialmente siguiendo la numeración arábica. Las notas al texto irán numeradas correlativamente y aparecerán al pie de la correspondiente página. Las fórmulas matemáticas se numerarán secuencialmente ajustadas al margen derecho de las mismas. La bibliografía aparecerá al final del trabajo, bajo la inscripción "Referencias" por orden alfabético de autores y, en cada una, ajustándose al siguiente orden: autor(es), año de publicación (distinguiendo a, b, c si hay varias correspondientes al mismo autor(es) y año), título del artículo o libro, título de la revista en cursiva, número de la revista y páginas.
6. En caso de que aparezcan tablas y gráficos, éstos podrán incorporarse directamente al texto o, alternativamente, presentarse todos juntos y debidamente numerados al final del trabajo, antes de la bibliografía.
7. En cualquier caso, se deberá adjuntar un disquete con el trabajo en formato word. Siempre que el documento presente tablas y/o gráficos, éstos deberán aparecer en ficheros independientes. Asimismo, en caso de que los gráficos procedan de tablas creadas en excel, estas deberán incorporarse en el disquete debidamente identificadas.

Junto al original del Papel de Trabajo se entregará también un resumen de un máximo de dos folios que contenga las principales implicaciones de política económica que se deriven de la investigación realizada.

PUBLISHING GUIDELINES OF WORKING PAPERS AT THE INSTITUTE FOR FISCAL STUDIES

This serie of *Papeles de Trabajo* (working papers) aims to provide those having an interest in Public Economics with a vehicle to publicize their ideas. The rules governing submission and selection of papers are the following:

1. The manuscripts submitted will all be assessed and may be directly accepted for publication, accepted with subjections for revision or rejected.
2. The papers shall be sent in duplicate to Subdirección General de Estudios Tributarios (The Deputy Direction of Tax Studies), Instituto de Estudios Fiscales (Institute for Fiscal Studies), Avenida del Cardenal Herrera Oria, nº 378, Madrid 28035.
3. The maximum length of the text including appendices and bibliography will be no more than 7000 words.
4. The originals should be double spaced. The first page of the manuscript should contain the following information: (1) the title; (2) the name and the institutional affiliation of the author(s); (3) an abstract of no more than 125 words; (4) JEL codes and keywords; (5) the postal and e-mail address of the corresponding author.
5. Sections will be numbered in sequence with arabic numerals. Footnotes will be numbered correlatively and will appear at the foot of the corresponding page. Mathematical formulae will be numbered on the right margin of the page in sequence. Bibliographical references will appear at the end of the paper under the heading "References" in alphabetical order of authors. Each reference will have to include in this order the following terms of references: author(s), publishing date (with an a, b or c in case there are several references to the same author(s) and year), title of the article or book, name of the journal in italics, number of the issue and pages.
6. If tables and graphs are necessary, they may be included directly in the text or alternatively presented altogether and duly numbered at the end of the paper, before the bibliography.
7. In any case, a floppy disk will be enclosed in Word format. Whenever the document provides tables and/or graphs, they must be contained in separate files. Furthermore, if graphs are drawn from tables within the Excell package, these must be included in the floppy disk and duly identified.

Together with the original copy of the working paper a brief two-page summary highlighting the main policy implications derived from the research is also requested.

ÚLTIMOS PAPELES DE TRABAJO EDITADOS POR EL INSTITUTO DE ESTUDIOS FISCALES

2004

- 1/04 Una propuesta para la regulación de precios en el sector del agua: el caso español.
Autores: M.^a Ángeles García Valiñas y Manuel Antonio Muñoz Pérez.
- 2/04 Eficiencia en educación secundaria e *inputs* no controlables: sensibilidad de los resultados ante modelos alternativos.
Autores: José Manuel Cordero Ferrera, Francisco Pedraja Chaparro y Javier Salinas Jiménez.
- 3/04 Los efectos de la política fiscal sobre el ahorro privado: evidencia para la OCDE.
Autores: Montserrat Ferre Carracedo, Agustín García García y Julián Ramajo Hernández.
- 4/04 ¿Qué ha sucedido con la estabilidad del empleo en España? Un análisis desagregado con datos de la EPA: 1987-2003.
Autores: José María Arranz y Carlos García-Serrano.
- 5/04 La seguridad del empleo en España: evidencia con datos de la EPA (1987-2003).
Autores: José María Arranz y Carlos García-Serrano.
- 6/04 La ley de Wagner: un análisis sintético.
Autor: Manuel Jaén García.
- 7/04 La vivienda y la reforma fiscal de 1998: un ejercicio de simulación.
Autor: Miguel Ángel López García.
- 8/04 Modelo dual de IRPF y equidad: un nuevo enfoque teórico y su aplicación al caso español.
Autor: Fidel Picos Sánchez.
- 9/04 Public expenditure dynamics in Spain: a simplified model of its determinants.
Autores: Manuel Jaén García y Luis Palma Martos.
- 10/04 Simulación sobre los hogares españoles de la reforma del IRPF de 2003. Efectos sobre la oferta laboral, recaudación, distribución y bienestar.
Autores: Juan Manuel Castañer Carrasco, Desiderio Romero Jordán y José Félix Sanz Sanz.
- 11/04 Financiación de las Haciendas regionales españolas y experiencia comparada.
Autor: David Cantarero Prieto.
- 12/04 Multidimensional indices of housing deprivation with application to Spain.
Autores: Luis Ayala y Carolina Navarro.
- 13/04 Multiple occurrence of welfare reciprocity: determinants and policy implications.
Autores: Luis Ayala y Magdalena Rodríguez.
- 14/04 Imposición efectiva sobre las rentas laborales en la reforma del impuesto sobre la renta personal (IRPF) de 2003 en España.
Autoras: María Pazos Morán y Teresa Pérez Barrasa.
- 15/04 Factores determinantes de la distribución personal de la renta: un estudio empírico a partir del PHOGUE.
Autores: Marta Pascual y José María Sarabia.
- 16/04 Política familiar, imposición efectiva e incentivos al trabajo en la reforma de la imposición sobre la renta personal (IRPF) de 2003 en España.
Autoras: María Pazos Morán y Teresa Pérez Barrasa.
- 17/04 Efectos del déficit público: evidencia empírica mediante un modelo de panel dinámico para los países de la Unión Europea.
Autor: César Pérez López.

- 18/04 Inequality, poverty and mobility: Choosing income or consumption as welfare indicators.
Autores: Carlos Gradín, Olga Cantó y Coral del Río.
- 19/04 Tendencias internacionales en la financiación del gasto sanitario.
Autora: Rosa María Urbanos Garrido.
- 20/04 El ejercicio de la capacidad normativa de las CCAA en los tributos cedidos: una primera evaluación a través de los tipos impositivos efectivos en el IRPF.
Autores: José María Durán y Alejandro Esteller.
- 21/04 Explaining. budgetary indiscipline: evidence from spanish municipalities.
Autores: Ignacio Lago-Peñas y Santiago Lago-Peñas.
- 22/04 Local governments' asymmetric reactions to grants: looking for the reasons.
Autor: Santiago Lago-Peñas.
- 23/04 Un pacto de estabilidad para el control del endeudamiento autonómico.
Autor: Roberto Fernández Llera
- 24/04 Una medida de la calidad del producto de la atención primaria aplicable a los análisis DEA de eficiencia.
Autora: Mariola Pinillos García.
- 25/04 Distribución de la renta, crecimiento y política fiscal.
Autor: Miguel Ángel Galindo Martín.
- 26/04 Políticas de inspección óptimas y cumplimiento fiscal.
Autores: Inés Macho Stadler y David Pérez Castrillo.
- 27/04 ¿Por qué ahorra la gente en planes de pensiones individuales?
Autores: Félix Domínguez Barrero y Julio López-Laborda.
- 28/04 La reforma del Impuesto sobre Actividades Económicas: una valoración con microdatos de la ciudad de Zaragoza.
Autores: Julio López-Laborda, M.^a Carmen Trueba Cortés y Anabel Zárata Marco.
- 29/04 Is an inequality-neutral flat tax reform really neutral?
Autores: Juan Prieto-Rodríguez, Juan Gabriel Rodríguez y Rafael Salas.
- 30/04 El equilibrio presupuestario: las restricciones sobre el déficit.
Autora: Belén Fernández Castro.

2005

- 1/05 Efectividad de la política de cooperación en innovación: evidencia empírica española.
Autores: Joost Heijs, Liliana Herrera, Mikel Buesa, Javier Sáiz Briones y Patricia Valadez.
- 2/05 A probabilistic nonparametric estimator.
Autores: Juan Gabriel Rodríguez y Rafael Salas.
- 3/05 Efectos redistributivos del sistema de pensiones de la seguridad social y factores determinantes de la elección de la edad de jubilación. Un análisis por comunidades autónomas.
Autores: Alfonso Utrilla de la Hoz y Yolanda Ubago Martínez.
- 4/05 La relación entre los niveles de precios y los niveles de renta y productividad en los países de la zona euro: implicaciones de la convergencia real sobre los diferenciales de inflación.
Autora: Ana R. Martínez Cañete.
- 5/05 La Reforma de la Regulación en el contexto autonómico.
Autor: Jaime Vallés Giménez.

- 6/05 Desigualdad y bienestar en la distribución intraterritorial de la renta, 1973-2000.
Autores: Luis Ayala Cañón, Antonio Jurado Málaga y Francisco Pedraja Chaparro.
- 7/05 Precios inmobiliarios, renta y tipos de interés en España.
Autor: Miguel Ángel López García.
- 8/05 Un análisis con microdatos de la normativa de control del endeudamiento local.
Autores: Jaime Vallés Giménez, Pedro Pascual Arzoz y Fermín Cabasés Hita.
- 9/05 Macroeconomics effects of an indirect taxation reform under imperfect competition.
Autor: Ramón J. Torregrosa.
- 10/05 Análisis de incidencia del gasto público en educación superior: nuevas aproximaciones.
Autora: María Gil Izquierdo.
- 11/05 Feminización de la pobreza: un análisis dinámico.
Autora: María Martínez Izquierdo.
- 12/05 Efectos del impuesto sobre las ventas minoristas de determinados hidrocarburos en la economía extremeña: un análisis mediante modelos de equilibrio general aplicado.
Autores: Francisco Javier de Miguel Vélez, Manuel Alejandro Cardenete Flores y Jesús Pérez Mayo.
- 13/05 La tarifa lineal de Pareto en el contexto de la reforma del IRPF.
Autores: Luis José Imedio Olmedo, Encarnación Macarena Parrado Gallardo y María Dolores Sarrión Gavilán.
- 14/05 Modelling tax decentralisation and regional growth.
Autores: Ramiro Gil-Serrate y Julio López-Laborda.
- 15/05 Interactions inequality-polarization: characterization results.
Autores: Juan Prieto-Rodríguez, Juan Gabriel Rodríguez y Rafael Salas.
- 16/05 Políticas de competencia impositiva y crecimiento: el caso irlandés.
Autores: Santiago Díaz de Sarralde, Carlos Garcimartín y Luis Rivas.
- 17/05 Optimal provision of public inputs in a second-best scenario.
Autores: Diego Martínez López y A. Jesús Sánchez Fuentes.
- 18/05 Nuevas estimaciones del pleno empleo de las regiones españolas.
Autores: Javier Capó Parrilla y Francisco Gómez García.
- 19/05 US deficit sustainability revisited: a multiple structural change approach.
Autores: Óscar Bajo-Rubio, Carmen Díaz-Roldán y Vicente Esteve.
- 20/05 Aproximación a los pesos de calidad de vida de los “Años de Vida Ajustados por Calidad” mediante el estado de salud autopercibido.
Autores: Anna García-Altés, Jaime Pinilla y Salvador Peiró.
- 21/05 Redistribución y progresividad en el Impuesto sobre Sucesiones y Donaciones: una aplicación al caso de Aragón.
Autor: Miguel Ángel Barberán Lahuerta.
- 22/05 Estimación de los rendimientos y la depreciación del capital humano para las regiones del sur de España.
Autora: Inés P. Murillo.
- 23/05 El doble dividendo de la imposición ambiental. Una puesta al día.
Autor: Miguel Enrique Rodríguez Méndez.
- 24/05 Testing for long-run purchasing power parity in the post bretton woods era: evidence from old and new tests.
Autor: Julián Ramajo Hernández y Montserrat Ferré Cariacedo.

- 25/05 Análisis de los factores determinantes de las desigualdades internacionales en las emisiones de CO₂ *per cápita* aplicando el enfoque distributivo: una metodología de descomposición por factores de Kaya.
Autores: Juan Antonio Duro Moreno y Emilio Padilla Rosa.
- 26/05 Planificación fiscal con el impuesto dual sobre la renta.
Autores: Félix Domínguez Barrero y Julio López Laborda.
- 27/05 El coste recaudatorio de las reducciones por aportaciones a planes de pensiones y las deducciones por inversión en vivienda en el IRPF 2002.
Autores: Carmen Marcos García, Alfredo Moreno Sáez, Teresa Pérez Barrasa y César Pérez López.
- 28/05 La muestra de declarantes IEF-AEAT 2002 y la simulación de reformas fiscales: descripción y aplicación práctica.
Autores: Alfredo Moreno, Fidel Picos, Santiago Díaz de Sarralde, María Antiquera y Lucía Torrejón.

2006

- 1/06 Capital gains taxation and progressivity.
Autor: Julio López Laborda.
- 2/06 Pigou's dividend versus Ramsey's dividend in the double dividend literature.
Autores: Eduardo L. Giménez y Miguel Rodríguez.
- 3/06 Assessing tax reforms. Critical comments and proposal: the level and distance effects.
Autores: Santiago Díaz de Sarralde Míguez y Jesús Ruiz-Huerta Carbonell.
- 4/06 Incidencia y tipos efectivos del impuesto sobre el patrimonio e impuesto sobre sucesiones y donaciones.
Autora: Laura de Pablos Escobar.
- 5/06 Descentralización fiscal y crecimiento económico en las regiones españolas.
Autores: Patricio Pérez González y David Cantarero Prieto.
- 6/06 Efectos de la corrupción sobre la productividad: un estudio empírico para los países de la OCDE.
Autores: Javier Salinas Jiménez y M.^a del Mar Salinas Jiménez.
- 7/06 Simulación de las implicaciones del equilibrio presupuestario sobre la política de inversión de las comunidades autónomas.
Autores: Jaime Vallés Giménez y Anabel Zárate Marco.
- 8/06 The composition of public spending and the nationalization of party systems in western Europe.
Autores: Ignacio Lago-Peñas y Santiago Lago-Peñas.
- 9/06 Factores explicativos de la actividad reguladora de las Comunidades Autónomas (1989-2001).
Autores: Julio López Laborda y Jaime Vallés Giménez.
- 10/06 Disciplina crediticia de las Comunidades Autónomas.
Autor: Roberto Fernández Llera.
- 11/06 Are the tax mix and the fiscal pressure converging in the European Union?
Autor: Francisco J. Delgado Rivero.
- 12/06 Redistribución, inequidad vertical y horizontal en el impuesto sobre la renta de las personas físicas (1982-1998).
Autora: Irene Perrote.

- 13/06 Análisis económico del rendimiento en la prueba de conocimientos y destrezas imprescindibles de la Comunidad de Madrid.
Autores: David Trillo del Pozo, Marta Pérez Garrido y José Marcos Crespo.
- 14/06 Análisis de los procesos privatizadores de empresas públicas en el ámbito internacional. Motivaciones: moda política versus necesidad económica.
Autores: Almudena Guarnido Rueda, Manuel Jaén García e Ignacio Amate Fortes.
- 15/06 Privatización y liberalización del sector telefónico español.
Autores: Almudena Guarnido Rueda, Manuel Jaén García e Ignacio Amate Fortes.
- 16/06 Un análisis taxonómico de las políticas para PYME en Europa: objetivos, instrumentos y empresas beneficiarias.
Autor: Antonio Fonfría Mesa.
- 17/06 Modelo de red de cooperación en los parques tecnológicos: un estudio comparado.
Autora: Beatriz González Vázquez.
- 18/06 Explorando la demanda de carburantes de los hogares españoles: un análisis de sensibilidad.
Autores: Santiago Álvarez García, Marta Jorge García-Inés y Desiderio Romero Jordán.
- 19/06 Cross-country income mobility comparisons under panel attrition: the relevance of weighting schemes.
Autores: Luis Ayala, Carolina Navarro y Mercedes Sastre.
- 20/06 Financiación Autonómica: algunos escenarios de reforma de los espacios fiscales.
Autores: Ana Herrero Alcalde, Santiago Díaz de Sarralde, Javier Loscos Fernández, María Antiquera y José Manuel Tránchez.
- 21/06 Child nutrition and multiple equilibria in the human capital transition function.
Autores: Berta Rivera, Luis Currais y Paolo Rungo.
- 22/06 Actitudes de los españoles hacia la hacienda pública.
Autor: José Luis Sáez Lozano.
- 23/06 Progresividad y redistribución a través del IRPF español: un análisis de bienestar social para el periodo 1982-1998.
Autores: Jorge Onrubia Fernández, María del Carmen Rodado Ruiz, Santiago Díaz de Sarralde y César Pérez López.
- 24/06 Análisis descriptivo del gasto sanitario español: evolución, desglose, comparativa internacional y relación con la renta.
Autor: Manuel García Goñi.
- 25/06 El tratamiento de las fuentes de renta en el IRPF y su influencia en la desigualdad y la redistribución.
Autores: Luis Ayala Cañón, Jorge Onrubia Fernández y María del Carmen Rodado Ruiz.
- 26/06 La reforma del IRPF de 2007: una evaluación de sus efectos.
Autores: Santiago Díaz de Sarralde Míguez, Fidel Picos Sánchez, Alfredo Moreno Sáez, Lucía Torrejón Sanz y María Antiquera Pérez.
- 27/06 Proyección del cuadro macroeconómico y de las cuentas de los sectores institucionales mediante un modelo de equilibrio.
Autores: Ana María Abad, Ángel Cuevas y Enrique M. Quilis.
- 28/06 Análisis de la propuesta del tesoro Británico “Fiscal Stabilisation and EMU” y de sus implicaciones para la política económica en la Unión Europea.
Autor: Juan E. Castañeda Fernández.

- 29/06 Choosing to be different (or not): personal income taxes at the subnational level in Canada and Spain.
Autores: Violeta Ruiz Almendral y François Vaillancourt.
- 30/06 A projection model of the contributory pension expenditure of the Spanish social security system: 2004-2050.
Autores: Joan Gil, Miguel Ángel Lopez-García, Jorge Onrubia, Concepció Patxot y Guadalupe Souto.

2007

- 1/07 Efectos macroeconómicos de las políticas fiscales en la UE.
Autores: Oriol Roca Sagalés y Alfredo M. Pereira.
- 2/07 Deficit sustainability and inflation in EMU: an analysis from the fiscal theory of the price level.
Autores: Óscar Bajo-Rubio, Carmen Díaz-Roldán y Vicente Esteve.
- 3/07 Contraste empírico del modelo monetario de tipos de cambio: cointegración y ajuste no lineal.
Autor: Julián Ramajo Hernández.
- 4/07 An empirical analysis of capital taxation: equity vs. tax compliance.
Autores: José M.^a Durán Cabré y Alejandro Esteller Moré.
- 5/07 Education and health in the OECD: a macroeconomic approach.
Autoras: Cecilia Albert y María A. Davia.
- 6/07 Understanding the effect of education on health across European countries.
Autoras: Cecilia Albert y María A. Davia.
- 7/07 Polarization, fractionalization and conflict.
Autores: Joan Esteban y Debraj Ray.
- 8/07 Immigration in a segmented labor market: the effects on welfare.
Autor: Javier Vázquez Grenno.
- 9/07 On the role of public debt in an OLG Model with endogenous labor supply.
Autor: Miguel Ángel López García.
- 10/07 Assessing profitability in rice cultivation using the Policy Matrix Analysis and profit-efficient data.
Autores: Andrés J. Picazo-Tadeo, Ernest Reig y Vicent Estruch.
- 11/07 Equidad y redistribución en el Impuesto sobre Sucesiones y Donaciones: análisis de los efectos de las reformas autonómicas.
Autores: Miguel Ángel Barberán Lahuerta y Marta Melguizo Garde.
- 12/07 Valoración y determinantes del stock de capital salud en la Comunidad Canaria y Cataluña.
Autores: Juan Oliva y Néboa Zozaya.
- 13/07 La nivelación en el marco de la financiación de las Comunidades Autónomas.
Autores: Ana Herrero Alcalde y Jorge Martínez-Vázquez.
- 14/07 El gasto en defensa en los países desarrollados: evolución y factores explicativos.
Autor: Antonio Fonfría Mesa.
- 15/07 Los costes del servicio de abastecimiento de agua. Un análisis necesario para la regulación de precios.
Autores: Ramón Barberán Ortí, Alicia Costa Toda y Alfonso Alegre Val.
- 16/07 Precios, impuestos y compras transfronterizas de carburantes.
Autores: Andrés Leal Marcos, Julio López Laborda y Fernando Rodrigo Saucó.

- 17/07 Análisis de la distribución de las emisiones de CO₂ a nivel internacional mediante la adaptación del concepto y las medidas de polarización.
Autores: Juan Antonio Duro Moreno y Emilio Padilla Rosa.
- 18/07 Foreign direct investment and regional growth: an analysis of the Spanish case.
Autores: Óscar Bajo Rubio, Carmen Díaz Mora y Carmen Díaz Roldán.
- 19/07 Convergence of fiscal pressure in the EU: a time series approach.
Autores: Francisco J. Delgado y María José Presno.
- 20/07 Impuestos y protección medioambiental: preferencias y factores.
Autores: María de los Ángeles García Valiñas y Benno Torgler.
- 21/07 Modelización paramétrica de la distribución personal de la renta en España. Una aproximación a partir de la distribución Beta generalizada de segunda especie.
Autores: Mercedes Prieto Alaiz y Carmelo García Pérez.
- 22/07 Desigualdad y delincuencia: una aplicación para España.
Autores: Rafael Muñoz de Bustillo, Fernando Martín Mayoral y Pablo de Pedraza.
- 23/07 Crecimiento económico, productividad y actividad normativa: el caso de las Comunidades Autónomas.
Autor: Jaime Vallés Giménez.
- 24/07 Descentralización fiscal y tributación ambiental. El caso del agua en España.
Autores: Anabel Zárata Marco, Jaime Vallés Giménez y Carmen Trueba Cortés.
- 25/07 Tributación ambiental en un contexto federal. Una aplicación empírica para los residuos industriales en España.
Autores: Anabel Zárata Marco, Jaime Vallés Giménez y Carmen Trueba Cortés.
- 26/07 Permisos de maternidad, paternidad y parentales en Europa: algunos elementos para el análisis de la situación actual.
Autoras: Carmen Castro García y María Pazos Morán.
- 27/07 ¿Quién soporta las cotizaciones sociales empresariales?. Una panorámica de la literatura empírica.
Autor: Ángel Melguizo Esteso.
- 28/07 Una propuesta de financiación municipal.
Autores: Manuel Esteban Cabrera y José Sánchez Maldonado.
- 29/07 Do R&D programs of different government levels overlap in the European Union.
Autoras: Isabel Busom y Andrea Fernández-Ribas.
- 30/07 Proyecciones de tablas de mortalidad dinámicas de España y sus Comunidades Autónomas.
Autores: Javier Alonso Meseguer y Simón Sosvilla Rivero.
- 2008**
- 1/08 Estudio descriptivo del voto económico en España.
Autores: José Luis Sáez Lozano y Antonio M. Jaime Castillo.
- 2/08 The determinants of tax morale in comparative perspective: evidence from a multilevel analysis.
Autores: Ignacio Lago-Peñas y Santiago Lago-Peñas.
- 3/08 Fiscal decentralization and the quality of government: evidence from panel data.
Autores: Andreas P. Kyriacou y Oriol Roca-Sagalés.
