## **ABSTRACT**

This article presents an innovative methodology to empirically evaluate the response of the rate of convergence in the neoclassical growth model to changes in the conditional factors. We apply this method to test the sensitivity of the speed of convergence in the EU-15 during the period 1980-2002 to increases in human and public capital. The analysis proposes two scenarios of convergence: the first one will make it possible to estimate the effect on the speed of convergence arising from changes in the instruments in the EU as a whole; and a second scenario where the effect on the speed of convergence resulting from changes in each one of the countries is considered separately. In this way an attempt will be made to identify not only the potential of various public policies to influence European convergence, but also the role they may play in each country toward achieving convergence in the EU.

**JEL Code:** E13, O41, H54.

**Key words:** Speed of Convergence, Growth Model, Public Policies.

## I. INTRODUCTION

The relation between private productivity and policy instruments has been a topic of considerable interest in the literature on economic development. A key aspect in the literature on convergence has been the determination of the speed of convergence towards the stationary state. This is determined by its own structural characteristics, among which technology, public policies and the population growth rate are included. Recently, in the debate on convergence, the role played by these conditioning factors has gained prominence –primarily public policy instruments– with the objective of establishing whether part of the observed convergence (if any) can be attributed to these instruments.

An extensive and influential number of research papers demonstrate the existence of conditional convergence; that is, the tendency of the most backward economies to systematically grow at a faster rate than more developed economies, once the conditioning factors of this process are controlled (Mankiw *et al.*, 1992, Barro and Sala-i-Martin, 1995). Recently, in the debate on convergence, the role played by conditioning factors has gained prominence –primarily public policy instruments– with the objective of establishing whether part of the observed convergence (if any) can be attributed to these instruments.

In the context of the EU, development and cohesion policies have primarily supported public investment in infrastructures and in education, in addition to support policies for the private sector during the last 20 years. The analyses carried out suggest that these efforts have contributed positively to the process of convergence in productivity in the EU (Salinas *et al.*, 2006). However, recent difficulties encountered in relation to the reduction of disparities in the EU have led to questioning to what extent the speed of convergence could be altered by means of public policies in the European Union. In spite of a clear interest in this matter, few papers have analyzed the sensitivity of the speed of convergence and the majority are theoretical research papers (Turnovsky, 2002, Gokan, 2003, Klump *et al.*, 2008). Unlike these works, in this article a methodological proposal is put forth to estimate the response of the speed of convergence in the EU to changes in economic policy instruments. The analysis proposes two scenarios of convergence: the first one will make it possible to estimate the effect on the speed of convergence arising from changes in the instruments in the EU as a whole; and a second scenario where the effect on the speed of convergence resulting from changes in each one of the countries is considered separately. In this way an attempt will be made to identify not only the potential of various public policies to influence European convergence, but also the role they may play in each country toward achieving convergence in the EU. The proposal develops various scenarios with Matlab that will make it possible to

evaluate the sensitivity of the parameter of convergence in the face of variations in the analyzed determining factors, while the other factors remain *ceteris paribus*.

The article is structured as follows: in the next section, the proposal for empirically evaluating the sensibility of the speed of convergence in the face of changes in the conditioning factors is presented. Section 3 describes the data and presents the findings. Finally, in Section 4, the primary conclusions are presented.

## 2. CONDITIONAL CONVERGENCE AND SENSITIVITY ANALYSIS

As of the research carried out by Mankiw *et al.* (1992) and Barro y Sala-i-Martin (1995), the neoclassical growth model is commonly used in order to contrast conditional convergence. The methodology proposed to examine the response of the rate of convergence consists of the estimation of the convergence equation, recovery of the structural parameters and evaluate the sensibility of the parameter of convergence under specific assumptions about changes in the model. In addition, we simulate those changes<sup>1</sup> by introducing an extension in the neoclassical growth model. To do so, the fixed effects model provides the basis<sup>2</sup>, where it is assumed that each explanatory variable has a single coefficient; that is, it has the same effect on the dependent variable, while each individual variable has a different constant which represents the individual effect. Formally, the model to be estimated is the following:

$$\ln\left(\frac{y_{i,t}}{y_{i,t-1}}\right) = \mu + \beta \ln(y_{i,t-1}) + \alpha \ln(x_{i,t}) + \delta \eta_i + u_{i,t}; \quad (1)$$

where  $y_{it}$  is the annual GDP per employee of  $i = 1, \dots, N$  countries ( $N = 15$ ) and for an annual period of  $t = 1, \dots, T$  ( $T = 22$  from 1980 until 2002);  $x_{i,t}$  is a vector of  $k \times 1$  explanatory variables;  $\eta_i$  is the individual effect; and  $u_{i,t}$  is a disturbance term. In this case, the concept of conditioned convergence is analyzed by introducing heterogeneity in the model by means of the introduction of fixed effects and/or the effect of other variables,  $x_{i,t}$ , assuming that the fixed effects  $\eta_i$  are correlated with them.

---

<sup>1</sup> In the estimation of the model we used the routine programming in Matlab available in <http://www.spatial-econometrics.com/>. The simulations programming in Matlab for this work are available on request.

<sup>2</sup> The estimation method is determined by the Matlab programming used to perform the sensitivity analysis. Since GMM approach is suitable to deal with growth models in empirical work, we have also estimated the model with this method and we have reached similar results.

The estimation of the model (1) is carried out in deviations with respect to the mean using Ordinary Least Squares (OLS), making it possible to consistently estimate the parameters of the model associated with convergence- $\beta$  and with the explanatory variables since its consistency will not depend on the specification of fixed effects  $\eta_i$  which have been eliminated with the transformation. This estimation is also equivalent to estimating with the OLS model (1) or the model with the variables transformed by orthogonal deviations, a transformation proposed by Arellano (1988)<sup>3</sup>.

The extension of the estimated model (1) takes place through the introduction of changes (simulated increases) in exogenous variables of interest. The simulated increases are based on the minimum of the selected variable and they continue increasing with a fixed value,  $inc$ , until reaching a maximum value that, in this case, has been fixed at 100%, since the variables are taken as the percentage of GVA; but both the minimum value as well as the maximum value could be modified with absolute flexibility. The variations generated with Matlab are then placed in rows, until they complete a column, and they continue being placed in the first row of the next column until it has been completed - as has been mentioned above - and the same process continues likewise until a maximum value of 100% is reached. Therefore, the number of columns will depend on the increase  $inc$  selected, which in our paper is 5%. Furthermore, the analysis of the variations has been approached in two ways:

a: *Evaluating variations of all of the countries at the same time:*

$$\Delta(X_t)_{T \times S} = \begin{bmatrix} \Delta_{1,1} = -\min(X_t) & \Delta_{2,1} = \Delta_{1,T} + inc & \dots & \Delta_{S,1} = \Delta_{S-1,T} + inc \\ \Delta_{1,2} = \Delta_{1,1} + inc & \Delta_{2,2} = \Delta_{2,1} + inc & \vdots & \Delta_{S,2} = \Delta_{S,1} + inc \\ \vdots & \vdots & \ddots & \vdots \\ \Delta_{1,T} = \Delta_{1,T-1} + inc & \Delta_{2,T} = \Delta_{2,T-1} + inc & \dots & \Delta_{S,T} \approx 100\% \end{bmatrix}; \quad (2)$$

or vectorially:

$$\Delta_j(X_t) = [\Delta_{1,t}(X_t), \Delta_{2,t}(X_t), \dots, \Delta_{S,t}(X_t)] \quad (3)$$

b: *Evaluating variations of a specific country:*

$$\Delta^i(x_{i,t})_{T \times S} = \begin{bmatrix} \Delta_{1,1}^i = -\min(x_{i,t}) & \Delta_{2,1}^i = \Delta_{1,T}^i + inc & \dots & \Delta_{S,1}^i = \Delta_{S-1,T}^i + inc \\ \Delta_{1,2}^i = \Delta_{1,1}^i + inc & \Delta_{2,2}^i = \Delta_{2,1}^i + inc & \vdots & \Delta_{S,2}^i = \Delta_{S,1}^i + inc \\ \vdots & \vdots & \ddots & \vdots \\ \Delta_{1,T}^i = \Delta_{1,T-1}^i + inc & \Delta_{2,T}^i = \Delta_{2,T-1}^i + inc & \dots & \Delta_{S,T}^i \approx 100\% \end{bmatrix}; \quad (4)$$

<sup>3</sup> Given the model  $y_{i,t} = \alpha x_{i,t} + \eta_i + u_{i,t}$  Arellano (1988) defines the transformation in orthogonal deviations as:

$$\tilde{y}_{i,t} = \frac{(T-t-1)}{T-t} \left[ y_{i,t} - \frac{1}{(T-t-1)} (y_{i,(t+1)} + \dots + y_{i,T}) \right]$$

or vectorially as:

$$\Delta_j^i(x_{i,t}) = [\Delta_{1,t}^i(x_{i,t}), \Delta_{2,t}^i(x_{i,t}), \dots, \Delta_{S,t}^i(x_{i,t})] \quad (5)$$

Estimations of the model (1) and the vectors of (3) and (5) with the simulated variables will be used in order to carry out the estimations of the effects of specific explanatory variables that could be used as an instrument of economic policy, while the other variables remain *ceteris paribus*, in order to evaluate the effects on convergence gathered in parameter  $\beta$ .

Generically, the effect of introducing the increase of the exogenous variable for all of the countries can be evaluated with the following model:

$$\ln\left(\frac{y_{i,t}}{y_{i,t-1}}\right) - \hat{\alpha} \ln(x_{i,t}^{l \neq m}) = \mu + \beta \ln(y_{i,t-1}) + \gamma \ln(x_{i,t}^m + \Delta_j) + \delta \eta_i + u_{i,t}; \quad (6)$$

where  $\Delta_{j,t}$  is a column vector, corresponding to column  $j$  which incorporates the gradual increases for  $t=1, \dots, T$  for the explanatory variable  $x_{i,t}^m$  of each country, to be evaluated of the  $k$  exogenous variables, being  $l=1, \dots, k$ . In this way,  $j=1, \dots, S$  estimations of the model (6) are carried out, resulting in different values of the parameter of convergence  $\beta$ .

In particular, the effect of variations on the variable of a specific country can be evaluated, estimating the model:

$$\ln\left(\frac{y_{i,t}}{y_{i,t-1}}\right) - \hat{\alpha} \ln(x_{i,t}^{l \neq m}) = \mu + \beta \ln(y_{i,t-1}) + \gamma \ln(x_{i,t}^m + \Delta_j^i) + \delta \eta_i + u_{i,t}; \quad (7)$$

where  $\Delta_{j,t}^i$  is a column vector, corresponding to column  $j$  which incorporates the gradual increases for  $t=1, \dots, T$  for the explanatory variable  $x_{i,t}^m$  of country  $i$ , to be evaluated of the  $k$  exogenous variables, being  $l=1, \dots, k$ . In this way,  $j=1, \dots, S$  estimations of model (7) will be carried out for the  $i=1, \dots, N$  countries, resulting in different values of the convergence parameter  $\beta$  for each country.

### 3. DATA AND RESULTS

The study refers to the EU-15 countries and covers the period 1980-2002. The data used come from World Development Indicators (2005). This database contains information for employment, population, gross value added (GVA) and gross investment expressed in constant terms that are homogenized with purchasing power parity (PPP constant international US\$ in the year 2000). Data on public education expenditure is taken from OECD Education at a Glance and expressed in the same terms than the rest of variables.

**Table I**  
**VARIABLES EMPLOYED**

$y_{it}$	GVA per worker (PPP international dollars in the year 2000)
$S_{kit}$	Private investment as a percentage of GVA
$S_{git}$	Public investment as a percentage of GVA
$S_{hit}$	Public investment in education as a percentage of GVA
$g$	Rate of exogenous technical change constant and equal to 0.02
$n_{it}$	Rate of population growth by worker's age
$\delta$	Rate of capital depreciation constant and equal to 0.03

Below the scheme developed in the previous section has been applied to the data on the EU. To do so and in the first place, the equation (1) is estimated by applying the model of fixed effects proposed above<sup>4</sup>. The Wald test statistics show that the explanatory variables introduced in the analysis are conjointly significant.

**Table 2**  
**ESTIMATION OF CONVERGENCE EQUATION WITH TIME VARIABLE.**  
**DEPENDENT VARIABLE  $\ln(Y_{IT-IT}/Y_{IT-IT-1})$ .**

Independent variables	Data panel model with fixed effects
$\ln(y_{it-1})$	-0.063 (-3.12)**
$\ln S_k - \ln(n+g+\delta)$	0.024 (1.67)
$\ln S_g - \ln(n+g+\delta)$	0.01 (1.89)*
$\ln S_h - \ln(n+g+\delta)$	-0.015 (-1.36)
<b>Speed of convergence <math>\lambda</math></b>	<b>0.06</b>
Test F Individual effects	F(14,309)=4.49
Hausman Test	$\chi^2(6)=7.27$
Wald F Test	F(6,309)=4.9

The t-ratios shown in parentheses (). \* Significant parameter at 90%, \*\* at 95%.

The results of the estimation show a significant, positive speed of convergence that is in line with the most recent papers where it is proven that in recent decades the convergence process in the EU has intensified. The estimations carried out also make it possible to obtain some results as to the influence of the different variables related to public policies developed in European economies: public provision for infrastructures and education. In the first place, a positive and significant influence of public investment on the growth rate of European countries is derived from the analysis carried out. Significant results are not obtained for human capital, although this is a

<sup>4</sup> The obtaining of the convergence equation can be consulted in Delgado and Alvarez, (2001).

common finding in the literature, given the difficulties that arise when approaching this productive factor.

In order to detect the effect of changes in the economic policy instruments on the sensitivity of the speed of convergence equations, (6) and (7) were estimated. These equations were estimated with Matlab and, in all of the simulations, the values of the previously obtained parameters in the convergence analysis were used. In this study, the analysis focused precisely on the two primary policies developed within the European Union in recent decades: public investment and education expenditure<sup>5</sup>.

- Figure I presents the sensitivity function of the speed of convergence with respect to changes in the rate of public investment. The origin represents the result of the estimation of the speed of convergence with data on the EU-15. The graph shows that for the increase interval of the public investment rate, which is approximately between 0 and 30%, a positive response is obtained for the rate of speed, favoring convergence among member states. Another result of interest is that there is a limit to the capacity of public investment to encourage convergence, changing the track record of the beta convergence if public investment continue to growth. These are important findings since it endorses public policies devoted to increasing public infrastructures in European states but also show that we must take into account other factors that can conditioned their capacity to influence in growth (this is the case of private capital) and therefore high increases in public investment could not achieve the expected results.

**Figure I**

**RESPONSE OF B TO CHANGES IN THE RATE OF PUBLIC INVESTMENT**

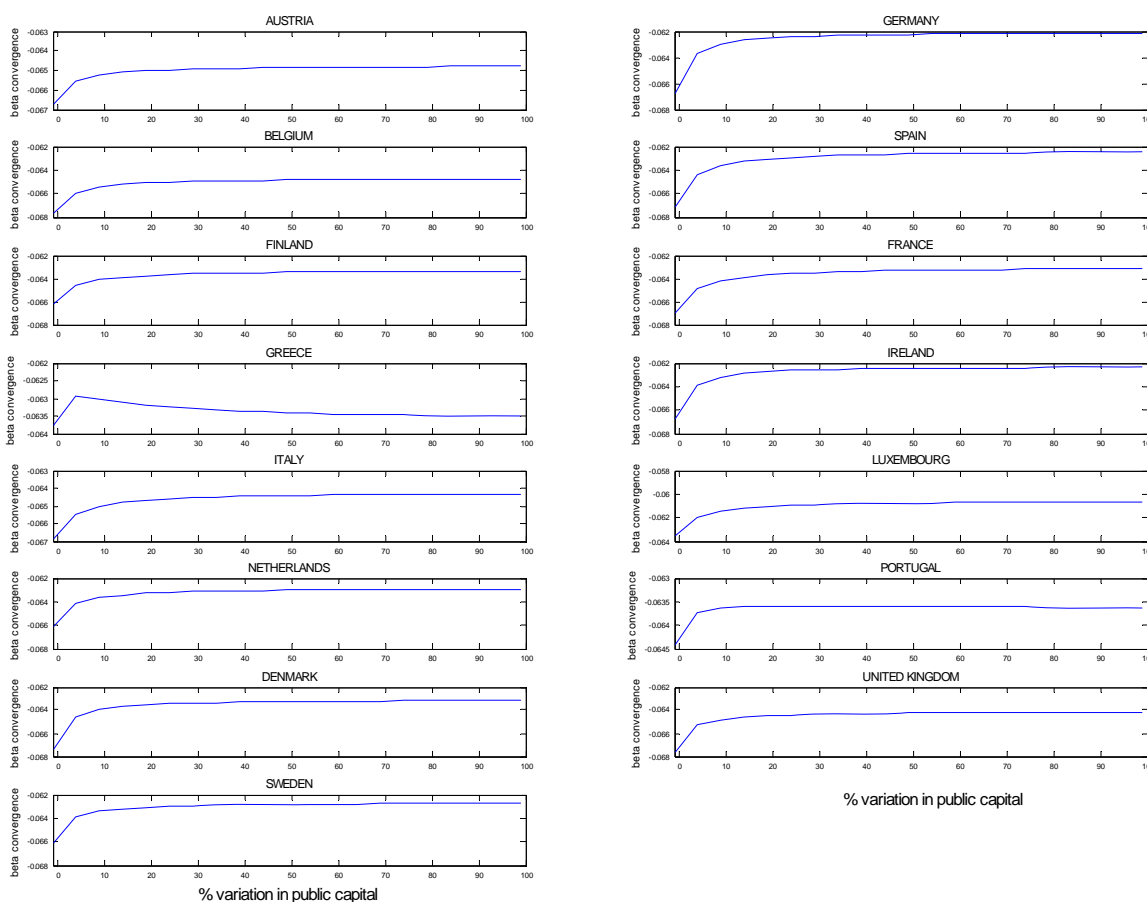

<sup>5</sup> The programming used will make it possible to carry out this analysis for any of the conditioning convergence factors proposed in the model.

- Figure 2 represents the same analysis, but focusing in the sensitivity of the speed of convergence with respect to the changes in the public investment rate of each European economy separately. The graphs represent the effect on beta of changes in the rate of public investment in each one of the countries under study. In this case, we observed a negative response for the rate of speed for the increase interval in the rate of public investment between 0 and 5% in each country. From this interval, the increases in the rate of investment will not have response in the rate of convergence. The only exception is Greece, which increases the rate of investment greater than 5% achieve a positive effect on the speed of convergence.

**Figure 2**

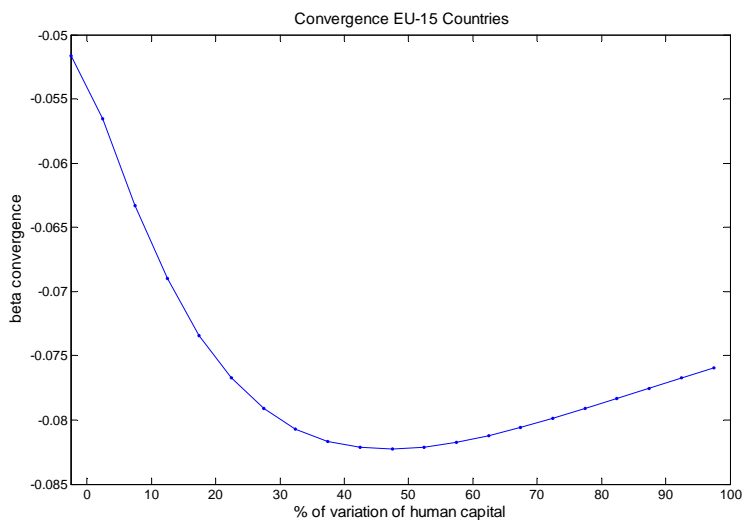

**RESPONSE OF B TO CHANGES IN THE RATE OF PUBLIC INVESTMENT BY COUNTRY**

- Figure 3 presents the sensitivity function of the speed of convergence with respect to the changes in the rate of public expenditure on education in the European Union. The graph shows that the increase interval of the rate of expenditure on education that influences the speed of convergence is greater than for the public investment (between 0 and 40%). In this case, we also find a limit to the capacity of public expenditure on education to encourage convergence.

**Figure 3**

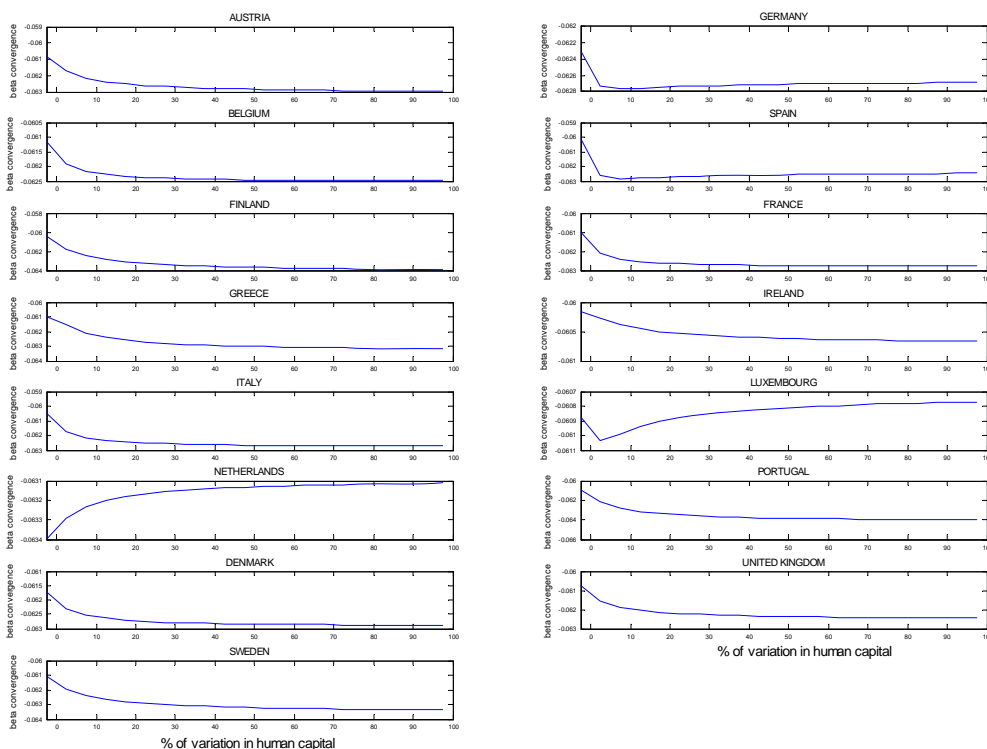

**RESPONSE OF B TO CHANGES IN THE RATE OF EXPENDITURE ON EDUCATION**

- Figure 4 presents the analysis of sensitivity by country. The results show that the increase in the rate of expenditure on education in each one of the countries studied separately favors the speed of convergence in all cases, with the only exception of Netherland and Luxembourg. Another aspect to highlight is that the ability to influence is limited to the range of 0 to 20%, being much lower in the cases of Germany, Spain and France.

**Figure 4**

**RESPONSE OF B TO CHANGES IN THE RATE OF EXPENDITURE ON EDUCATION BY COUNTRY**

## 4. CONCLUSIONS

The methodology proposed in this paper has made it possible to analyze the sensitivity of the speed of convergence with respect to simulated changes in the economic policy instruments, specifically public and human capital. Our result on the speed of convergence of the EU-15 showed that it depends on the increases of public and human capital accumulation, but that, not surprisingly, there is a limit to their ability to favour convergence.

In the last twenty years, public policies in the European Union have been dedicated fundamentally to reducing the differences in public infrastructures and education among member states, with the primary objective of promoting growth and convergence in productivity. The results obtained in this study suggest that the efforts devoted to promoting the accumulation of capital have favored the process of convergence in the period under study. In addition, the sensitivity analysis carried out has also made it possible to affirm that the speed of convergence is quite sensitive to changes in the process of accumulation of capital. This analysis has also made it possible to estimate the positive effect on the speed of convergence of changes in the rate of public investment and in expenditure on education and to identify those countries that can have significant influence on the convergence process.

## **SÍNTESIS**

### **PRINCIPALES IMPLICACIONES DE POLÍTICA ECONÓMICA**

This article presents an innovative methodology to empirically evaluate the response of the rate of convergence to changes in policy instruments in the context of EU-15 between 1980 and 2002. In this period, European development and cohesion policies have received greater attention and they have primarily supported public investment in infrastructures and in education. However, recent difficulties encountered in relation to the reduction of disparities in the EU have led to questioning to what extent the speed of convergence could be altered by means of public policies in the EU. Thus, the debate concerning the capacity of European policies to reduce income disparities remains open.

In this paper we simulated changes in the economic policy instruments, specifically public and human capital, in order to evaluate the capacity of these policies to influence in the convergence process in the EU. Our results show that physical and human capital accumulation appears to be important force driving the speed of convergence of the EU-15 during these years, but that, there is a limit to their ability to favour convergence. These results are in line with analyses that suggest that the efforts in public policies have contributed positively to the process of convergence in productivity in the EU. This work contributes to the EU convergence debate offering a tool to analyse the role of public policies on the convergence and to identify the countries that can have significance influence on this process.

## **NORMAS DE PUBLICACIÓN DE PAPELES DE TRABAJO DEL INSTITUTO DE ESTUDIOS FISCALES**

Esta colección de *Papeles de Trabajo* tiene como objetivo ofrecer un vehículo de expresión a todas aquellas personas interesadas en los temas de Economía Pública. Las normas para la presentación y selección de originales son las siguientes:

1. Todos los originales que se presenten estarán sometidos a evaluación y podrán ser directamente aceptados para su publicación, aceptados sujetos a revisión, o rechazados.
2. Los trabajos deberán enviarse por duplicado a la Subdirección de Estudios Tributarios. Instituto de Estudios Fiscales. Avda. Cardenal Herrera Oria, 378. 28035 Madrid.
3. La extensión máxima de texto escrito, incluidos apéndices y referencias bibliográficas será de 7000 palabras.
4. Los originales deberán presentarse mecanografiados a doble espacio. En la primera página deberá aparecer el título del trabajo, el nombre del autor(es) y la institución a la que pertenece, así como su dirección postal y electrónica. Además, en la primera página aparecerá también un abstract de no más de 125 palabras, los códigos JEL y las palabras clave.
5. Los epígrafes irán numerados secuencialmente siguiendo la numeración arábica. Las notas al texto irán numeradas correlativamente y aparecerán al pie de la correspondiente página. Las fórmulas matemáticas se numerarán secuencialmente ajustadas al margen derecho de las mismas. La bibliografía aparecerá al final del trabajo, bajo la inscripción "Referencias" por orden alfabético de autores y, en cada una, ajustándose al siguiente orden: autor(es), año de publicación (distinguiendo a, b, c si hay varias correspondientes al mismo autor(es) y año), título del artículo o libro, título de la revista en cursiva, número de la revista y páginas.
6. En caso de que aparezcan tablas y gráficos, éstos podrán incorporarse directamente al texto o, alternativamente, presentarse todos juntos y debidamente numerados al final del trabajo, antes de la bibliografía.
7. En cualquier caso, se deberá adjuntar un disquete con el trabajo en formato word. Siempre que el documento presente tablas y/o gráficos, éstos deberán aparecer en ficheros independientes. Asimismo, en caso de que los gráficos procedan de tablas creadas en excel, estas deberán incorporarse en el disquete debidamente identificadas.

***Junto al original del Papel de Trabajo se entregará también un resumen de un máximo de dos folios que contenga las principales implicaciones de política económica que se deriven de la investigación realizada.***

## **PUBLISHING GUIDELINES OF WORKING PAPERS AT THE INSTITUTE FOR FISCAL STUDIES**

This serie of *Papeles de Trabajo* (working papers) aims to provide those having an interest in Public Economics with a vehicle to publicize their ideas. The rules governing submission and selection of papers are the following:

1. The manuscripts submitted will all be assessed and may be directly accepted for publication, accepted with subjections for revision or rejected.
2. The papers shall be sent in duplicate to Subdirección General de Estudios Tributarios (The Deputy Direction of Tax Studies), Instituto de Estudios Fiscales (Institute for Fiscal Studies), Avenida del Cardenal Herrera Oria, nº 378, Madrid 28035.
3. The maximum length of the text including appendices and bibliography will be no more than 7000 words.
4. The originals should be double spaced. The first page of the manuscript should contain the following information: (1) the title; (2) the name and the institutional affiliation of the author(s); (3) an abstract of no more than 125 words; (4) JEL codes and keywords; (5) the postal and e-mail address of the corresponding author.
5. Sections will be numbered in sequence with arabic numerals. Footnotes will be numbered correlatively and will appear at the foot of the corresponding page. Mathematical formulae will be numbered on the right margin of the page in sequence. Bibliographical references will appear at the end of the paper under the heading "References" in alphabetical order of authors. Each reference will have to include in this order the following terms of references: author(s), publishing date (with an a, b or c in case there are several references to the same author(s) and year), title of the article or book, name of the journal in italics, number of the issue and pages.
6. If tables and graphs are necessary, they may be included directly in the text or alternatively presented altogether and duly numbered at the end of the paper, before the bibliography.
7. In any case, a floppy disk will be enclosed in Word format. Whenever the document provides tables and/or graphs, they must be contained in separate files. Furthermore, if graphs are drawn from tables within the Excell package, these must be included in the floppy disk and duly identified.

***Together with the original copy of the working paper a brief two-page summary highlighting the main policy implications derived from the research is also requested.***

*Autores:* Javier Capó Parrilla y Francisco Gómez García.
- 19/05 US deficit sustainability revisited: a multiple structural change approach.  
*Autores:* Óscar Bajo-Rubio, Carmen Díaz-Roldán y Vicente Esteve.
- 20/05 Aproximación a los pesos de calidad de vida de los “Años de Vida Ajustados por Calidad” mediante el estado de salud autopercibido.  
*Autores:* Anna García-Altés, Jaime Pinilla y Salvador Peiró.
- 21/05 Redistribución y progresividad en el Impuesto sobre Sucesiones y Donaciones: una aplicación al caso de Aragón.  
*Autor:* Miguel Ángel Barberán Lahuerta.
- 22/05 Estimación de los rendimientos y la depreciación del capital humano para las regiones del sur de España.  
*Autora:* Inés P. Murillo.
- 23/05 El doble dividendo de la imposición ambiental. Una puesta al día.  
*Autor:* Miguel Enrique Rodríguez Méndez.
- 24/05 Testing for long-run purchasing power parity in the post bretton woods era: evidence from old and new tests.  
*Autor:* Julián Ramajo Hernández y Montserrat Ferré Cariacedo.

- 25/05 Análisis de los factores determinantes de las desigualdades internacionales en las emisiones de CO<sub>2</sub> *per cápita* aplicando el enfoque distributivo: una metodología de descomposición por factores de Kaya.  
*Autores:* Juan Antonio Duro Moreno y Emilio Padilla Rosa.
- 26/05 Planificación fiscal con el impuesto dual sobre la renta.  
*Autores:* Félix Domínguez Barrero y Julio López Laborda.
- 27/05 El coste recaudatorio de las reducciones por aportaciones a planes de pensiones y las deducciones por inversión en vivienda en el IRPF 2002.  
*Autores:* Carmen Marcos García, Alfredo Moreno Sáez, Teresa Pérez Barrasa y César Pérez López.
- 28/05 La muestra de declarantes IEF-AEAT 2002 y la simulación de reformas fiscales: descripción y aplicación práctica.  
*Autores:* Alfredo Moreno, Fidel Picos, Santiago Díaz de Sarralde, María Antiquera y Lucía Torrejón.

## 2006

- 1/06 Capital gains taxation and progressivity.  
*Autor:* Julio López Laborda.
- 2/06 Pigou's dividend versus Ramsey's dividend in the double dividend literature.  
*Autores:* Eduardo L. Giménez y Miguel Rodríguez.
- 3/06 Assessing tax reforms. Critical comments and proposal: the level and distance effects.  
*Autores:* Santiago Díaz de Sarralde Míguez y Jesús Ruiz-Huerta Carbonell.
- 4/06 Incidencia y tipos efectivos del impuesto sobre el patrimonio e impuesto sobre sucesiones y donaciones.  
*Autora:* Laura de Pablos Escobar.
- 5/06 Descentralización fiscal y crecimiento económico en las regiones españolas.  
*Autores:* Patricio Pérez González y David Cantarero Prieto.
- 6/06 Efectos de la corrupción sobre la productividad: un estudio empírico para los países de la OCDE.  
*Autores:* Javier Salinas Jiménez y M.<sup>a</sup> del Mar Salinas Jiménez.
- 7/06 Simulación de las implicaciones del equilibrio presupuestario sobre la política de inversión de las comunidades autónomas.  
*Autores:* Jaime Vallés Giménez y Anabel Zárate Marco.
- 8/06 The composition of public spending and the nationalization of party systems in western Europe.  
*Autores:* Ignacio Lago-Peñas y Santiago Lago-Peñas.
- 9/06 Factores explicativos de la actividad reguladora de las Comunidades Autónomas (1989-2001).  
*Autores:* Julio López Laborda y Jaime Vallés Giménez.
- 10/06 Disciplina crediticia de las Comunidades Autónomas.  
*Autor:* Roberto Fernández Llera.
- 11/06 Are the tax mix and the fiscal pressure converging in the European Union?  
*Autor:* Francisco J. Delgado Rivero.
- 12/06 Redistribución, inequidad vertical y horizontal en el impuesto sobre la renta de las personas físicas (1982-1998).  
*Autora:* Irene Perrote.

- 13/06 Análisis económico del rendimiento en la prueba de conocimientos y destrezas imprescindibles de la Comunidad de Madrid.  
*Autores:* David Trillo del Pozo, Marta Pérez Garrido y José Marcos Crespo.
- 14/06 Análisis de los procesos privatizadores de empresas públicas en el ámbito internacional. Motivaciones: moda política versus necesidad económica.  
*Autores:* Almudena Guarnido Rueda, Manuel Jaén García e Ignacio Amate Fortes.
- 15/06 Privatización y liberalización del sector telefónico español.  
*Autores:* Almudena Guarnido Rueda, Manuel Jaén García e Ignacio Amate Fortes.
- 16/06 Un análisis taxonómico de las políticas para PYME en Europa: objetivos, instrumentos y empresas beneficiarias.  
*Autor:* Antonio Fonfría Mesa.
- 17/06 Modelo de red de cooperación en los parques tecnológicos: un estudio comparado.  
*Autora:* Beatriz González Vázquez.
- 18/06 Explorando la demanda de carburantes de los hogares españoles: un análisis de sensibilidad.  
*Autores:* Santiago Álvarez García, Marta Jorge García-Inés y Desiderio Romero Jordán.
- 19/06 Cross-country income mobility comparisons under panel attrition: the relevance of weighting schemes.  
*Autores:* Luis Ayala, Carolina Navarro y Mercedes Sastre.
- 20/06 Financiación Autonómica: algunos escenarios de reforma de los espacios fiscales.  
*Autores:* Ana Herrero Alcalde, Santiago Díaz de Sarralde, Javier Loscos Fernández, María Antiquera y José Manuel Tránchez.
- 21/06 Child nutrition and multiple equilibria in the human capital transition function.  
*Autores:* Berta Rivera, Luis Currais y Paolo Rungo.
- 22/06 Actitudes de los españoles hacia la hacienda pública.  
*Autor:* José Luis Sáez Lozano.
- 23/06 Progresividad y redistribución a través del IRPF español: un análisis de bienestar social para el periodo 1982-1998.  
*Autores:* Jorge Onrubia Fernández, María del Carmen Rodado Ruiz, Santiago Díaz de Sarralde y César Pérez López.
- 24/06 Análisis descriptivo del gasto sanitario español: evolución, desglose, comparativa internacional y relación con la renta.  
*Autor:* Manuel García Goñi.
- 25/06 El tratamiento de las fuentes de renta en el IRPF y su influencia en la desigualdad y la redistribución.  
*Autores:* Luis Ayala Cañón, Jorge Onrubia Fernández y María del Carmen Rodado Ruiz.
- 26/06 La reforma del IRPF de 2007: una evaluación de sus efectos.  
*Autores:* Santiago Díaz de Sarralde Míguez, Fidel Picos Sánchez, Alfredo Moreno Sáez, Lucía Torrejón Sanz y María Antiquera Pérez.
- 27/06 Proyección del cuadro macroeconómico y de las cuentas de los sectores institucionales mediante un modelo de equilibrio.  
*Autores:* Ana María Abad, Ángel Cuevas y Enrique M. Quilis.
- 28/06 Análisis de la propuesta del tesoro Británico “Fiscal Stabilisation and EMU” y de sus implicaciones para la política económica en la Unión Europea.  
*Autor:* Juan E. Castañeda Fernández.

- 29/06 Choosing to be different (or not): personal income taxes at the subnational level in Canada and Spain.  
*Autores:* Violeta Ruiz Almendral y François Vaillancourt.
- 30/06 A projection model of the contributory pension expenditure of the Spanish social security system: 2004-2050.  
*Autores:* Joan Gil, Miguel Ángel Lopez-García, Jorge Onrubia, Concepció Patxot y Guadalupe Souto.

## 2007

- 1/07 Efectos macroeconómicos de las políticas fiscales en la UE.  
*Autores:* Oriol Roca Sagalés y Alfredo M. Pereira.
- 2/07 Deficit sustainability and inflation in EMU: an analysis from the fiscal theory of the price level.  
*Autores:* Óscar Bajo-Rubio, Carmen Díaz-Roldán y Vicente Esteve.
- 3/07 Contraste empírico del modelo monetario de tipos de cambio: cointegración y ajuste no lineal.  
*Autor:* Julián Ramajo Hernández.
- 4/07 An empirical analysis of capital taxation: equity vs. tax compliance.
